3F SOUND LUX

LED CATALOGUE

3F Sound Lux

Design: **3F Filippi + Mascagni**

3F Sound Lux is a fixture that has been developed to provide innovative lighting in the workplace. The fixture is the result of a combination of different materials and lighting excellence.

The light fixture is composed of an acoustic panel covered with a microperforated laminate and is fitted with a LED source that emits a white light (3000 degrees Kelvin).

This light fixture was designed to provide the best visual and acoustic comfort to make working environments more welcoming. Available with various finishes so as to integrate perfectly with its surroundings 3F Sound Lux can also be suspension installed.

Its design also makes it particularly versatile because its modules allow for easy reconfiguration to suit any environment to adapt effectively if the furniture is rearranged in the work space.

3F Sound Lux was developed in collaboration with Mascagni S.p.A., the Italian brand of excellence in the design and manufacture of office furniture.

Collaboration started by integrating 3F Filippi's lighting know-how with Mascagni's vast experience and design capabilities in creating high-end professional furnishings.

This highly technical partnership confirms 3F Filippi's determination to obtain the same results for work environments that they have already achieved on a global level in the Industrial and Retail lighting sectors.

ACOUSTIC WELLBEING

A general approach is not suitable to consider space for personal, group, work or leisure use where sound becomes an important factor for comfort and productivity.

Every place has their own characteristics that can vary according to the number of people in it and the way it is built and the materials used. For every space it is necessary to study a specific solution: there are no constraints defined without careful control.

Accurate analysis of an open space, for example must start with the interaction between the people who work there and how they work. Different jobs require different levels of concentration and interaction.

With careful and rational arrangement of the acoustic panels, living spaces go back to being comfortable just as work becomes more productive and bad habits give way to consistent communication.

ACOUSTIC PERFORMANCE

The acoustic performance of the 3F Sound Lux panels was assessed using special measurements in a reverberation chamber carried out by the Giordano Institute (an internationally recognised Certification Body). The values obtained confirmed the exceptional sound absorption of the panel in the frequency range of speech. The panel is certified as class A, the best among the categories defined in EN ISO 11654, in the speech spectrum in octave bands from 1000 a 4000 Hz. The 3F Sound Lux acoustic panel covers a range of frequencies from 500 to 5000 Hz with excellent results from between 1000 and 1250 Hz where it reaches a value of 99%.

The technology and materials used ensure that the acoustic panels have Class 1 Fire Reaction Classification (reference to B S2 d0 certification with reference to European standard EN13501-1).

SCREENS AND FINISHES

Sound Lux technology makes it possible to resolve complex issues easily.

Starting with energy wastage which is eliminated thanks to the special lenses applied to the LED sources which were designed and produced entirely by 3F Filippi, which allow for efficiency of 97% (a value that places this fixture at the top of its class). These lenses also have a significant effect on the visual comfort of the light fixture. Installed on desks Sound Lux prevents annoying reflections on computer screens and mobile devices and does not produce any glare that could disturb colleagues sitting at other work stations.

DALI dimmable cabling also increases its ease of use making it possible to adjust the power and brightness as required or in an automated way.

3F Sound Lux

Construction characteristics

Illuminotechnical characteristics

Controlled symmetric distribution.

Lifetime (L92/B10): 30000 h. (tq+25°C)

Lifetime (L85/B10): 50000 h. (tq+25°C)

Lifetime (L80/B10): 80000 h. (tq+25°C)

Lifetime (L75/B10): 100000 h. (tq+25°C)

Photobiological safety RG0 unlimited, risk exempt, in compliance with IEC 62471, IEC/TR 62778.

Acoustic

3F Sound Lux acoustic panel covers a range of frequencies from 500 to 5000 Hz, with exceptional results in the range from 1000 to 1250 Hz where it reaches a value of 99%. Certified as class A, (UNI EN ISO 11654) in the speech spectrum in octave bands from 1000 to 4000 Hz.

Mechanical characteristics

The lighting fixture consists of an acoustic panel covered by a micro-perforated layer of natural wood.

Hot-galvanized steel lighting unit coated with a polyester based paint enclosed in a stainless steel casing.

Transparent methacrylate controlled distribution lenses with flat external surface. Suspensions fitted with chrome bosses

and quick-acting regulator, 2 m galvanized steel cable.

Electrical characteristics

In compliance with EN 60598-1.

Transparent 2.3 m 5x1.5 mm power cable with white power supply case for mounting on the ceiling.

Source characteristics

- Linear LED modules.
- Color initial tolerance (MacAdam): SDCM 3.

On request

- different power levels, colour rendering indices and colour temperatures
- body with a tobacco finish

Applications

Environments with video terminals, executive, open space and representative offices.

Installation

Suspension installation.

Light Management

The DALI products of this family can be controlled manually with the technology 3F Easy or even automatically and manually using the 3F Smart Dimming technology (refer to "Light Management" on our website).

Dimensions

3F Sound Lux | Black Forest

Code 6001
