3F Filippi HD

19th February 2018

A new suspended product by the Milan-based studio Park Associati, designed for offices, this device is made of aluminium and may provide direct, indirect and direct/indirect 4000k lighting. The lighting fixture is available with opal or microprismatic diffusers. The head cap's diffuser is customisable and allows to instinctively distinguish the working activities within the same open space. 3F HD is available also in the recessed and semi-recessed versions and will be on sale by summer 2018.
